2018	Iconic Award 2018 'Innovative interior' - best of best - Pivoting room dividers

PORTAPIVOT

Ingenious hardware solutions designed to create visual masterpieces

PortaPivot develops made-to-measure door hardware, specifically designed for local craftsmen all around the world.

Our production philosophy combines the strength of our technology, engineering and design capabilities, with local flavours and craftsmanship.

WHAT IS THE MOST FREQUENTLY USED ELEMENT IN YOUR HOME?

Windows, bathrooms, and kitchens rank higher on the 'to do' list. Doors are not as often seen as design elements, as they were in the past. Interior doors will be the most-used and visually present elements in your new home. After all, they cover a very considerable percentage of the wall surface, making or breaking the atmosphere of a room. Definitely something to consider!

STEALTHPIVOT

PATENTED TECHNOLOGY

StealthPivot is a compact and innovative pivot hinge system, that can be fitted inside virtually any door leaf. The pivot hinge features a high-tech comfort closure that works in all swing directions up to 360°. When fitted and installed, the hinge remains invisible, hence the name 'StealthPivot'.

The self-closing pivot hinge makes it possible to create pivot doors up to 150 kg, that feel as light as a feather. The NL version is designed for pivot doors up to 75 kg and features an adjustable offset axis point that can be set up at 80 mm, 178 mm; combined with Portapivot door systems or any other desired position when installed in a custom door leaf. The XL version is designed for large pivot doors up to 150 kg. The axis can be positioned at 1/3 (-50 mm) up to the centre of the door leaf, with a configurable swing operation of 180° or 360° like a carousel.

for door leaves up to 2250 mm and 150 kg

STEALTHPIVOT

A great deal of attention went into easy integration and installation on site, to ensure that the resulting pivot system could be used in both new and existing homes, regardless the construction.

Both pivot hinges are mounted on top of the finished floor and a solid or reinforced ceiling surface, without the need for any built-in fixtures. The minimal anchoring (2 screws and plugs ± 4.5 cm deep) allows installation on any type of surface.

The hinge mounts are equipped with patented 0° positioning parts. Optional magnets and 1-way accessories can be installed if necessary.

The Belgian manufacturer ANYWAYdoors has already received multiple international design awards for its 'pivoting room dividers', equipped with StealthPivot XL hinges.

EN1191 – Resistance to repeated opening and closing = C5 200.000x cycles (durability tested and approved by WOOD.BE)

PORTAPIVOT 6530

This door type combines 'StealthPivot' with a minimal anodized aluminium frame 65 x 30 mm.

This frame can be fitted with any type of 6 or 8 mm thick tempered or laminated safety glass or other solid materials from 6 up to 12 mm.

For aesthetic design purposes, the frame can be fitted with optional anodized aluminium grid profiles on top of the glass to create a personalized design.

PORTAPIVOT 5045

This door type combines 'StealthPivot' with an aluminium spaceframe structure which can be fitted with various materials such as MDF, Resopal Massiv, Hi-Macs, Corian, Ceramics, lacquered or mirrored glass, ...

PORTAPIVOT GLASS

This door type combines 'StealthPivot' with aluminium glass patch fittings, designed with minimalist architecture in mind. They can be fitted with any type of 10 mm thick tempered safety glass.

SLIDEWAYS

These sliding doors feature a smooth and compact design with concealed soft-close technology. Sliding doors provide a visual barrier between two spaces or can be used to close off a wardrobe. They are, however, less suitable for frequently-used passages.

Slideways offers hardware for three different door panel types: 10 mm tempered glass (Slideways GLASS), an aluminium frame with 1 glass panel (Slideways 6530) and a spaceframe frame structure for a finish of your choice (Slideways 5045).

Slideways is developed as a 'surface-mounted' sliding door concept, which is the most advisable type. The compact aluminium rail system can be mounted onto the wall or onto the ceiling.

The rail can also be installed in a wall recess, subject to the correct constructional preparations. Sliding doors may look simple, but the constructional situations are often complex, so it is important to obtain all the necessary technical requirements in time.

PORTAPIVOT DOOR HANDLES

To complete the look, we offer a range of modern door grips. Anodized aluminium is very durable and matches seamlessly with the rest of our products.

DRESSWALL

By literally thinking 'out of the box', we came up with a modular walk-in closet system based on our strongest design asset: perfect customization with advanced technology and flexible choice of finishing materials.

This innovative wardrobe system allows you to create a state of the art walk-in dressing room. By minimizing the elements, we prevent you from putting a 'closet inside a closet'.

DRESS WALL offers a purified and elegant alternative to your traditional wardrobe, and feels like a boutique at home.

DRAWER FINISHES

DRESS WALL consists of an anodized aluminium base structure, which can be used free-standing between floor and solid ceiling surface, or that can be mounted against a wall.

The vertical profiles feature fully adjustable stainless-steel shelf brackets and stackable drawer sideboards made from anodized aluminium.

The shelves can be made from any type of solid material with thicknesses from 8 up to 14 mm. Suggested finishes such as tempered glass, wood, ... create numerous design possibilities.

The stackable drawers side structure is designed to fit TA'OR made-to-measure drawers, equipped with Blum hardware.

The shelves, hangers and drawers can be arranged to satisfy anyone's storage needs. Even after installation, the arrangement remains easily adjustable due to modular locking technology.

Optional LED lighting is fully integrated along the entire vertical profile height. It's an important visual and functional feature that gives quite accurate colour representation (4100K).

TA'OR 

COMPACT AND SUSTAINABLE PACKAGING

PortaPivot is engineered with worldwide shipping in mind. Our made-to-measure aluminium profiles are transported in firm, stackable cardboard square cylinder tubes, offering perfect protection and weighing +- 15 to 25 kg depending on the selected product. The

assembly accessories such as rubber, corner joints, screws, door grips and pivot hinges are placed in a second square box with accessories, weighing +- 5 kg. Our doors are shipped in the most economical and sustainable way possible. The necessary finishing materials such as glass

etc. are purchased by your local craftsman to minimize the economical & ecological footprint.

This modus operandi combines our engineering, technology and designs with local suppliers, experience and craftsmanship.
